

DuraDuct™ UCR

Underground Corrosion Resistant Duct

Cutaway view of rectangular DuraDuct™ UCR

Cutaway view of round DuraDuct™ UCR

DuraDuct™ UCR is a stainless steel underground duct system that is designed to provide superior structural strength and integrity in a variety of harsh underground environments.

Available in both round and rectangular cross sections, the UCR system uses a proven liquid and airtight bolted joint connection, helping to reduce installation time, and does not require any additional reinforcing or supports, the bane of most underground duct systems.

With a fully customizable design, DuraDuct™ UCR is engineered to the specific requirements of each project. The unique design of the DuraDuct™ UCR system can eliminate the requirement for concrete encasement of the ductwork and reduces the excavation and backfill required.

The DuraDuct™ UCR duct assembly is shipped to site with fully welded and tested seams, ensuring a leak free installation. With a smooth inner surface allowing for effective air movement and available in lengths up to 10 feet, DuraDuct UCR is your answer when looking for a quick, easy, and cost-effective installation.

VaughanAir offers a comprehensive selection of fittings and configurations to suit your project's needs.

DuraDuct™ UCR is a unique pre-fabricated underground duct system that is ideal for corrosive environments.
